## Organic Chemistry Janice Smith 4th Edition

**janice gorzynski smith university of hawai'i chapter 9 ...** - • some organic compounds decompose in the presence of strong acid, so other methods have been developed to convert alcohols to alkenes. • a common method uses phosphorus oxychloride (POCl<sub>3</sub>) and pyridine (an amine base) in place of H<sub>2</sub>SO<sub>4</sub> or TsOH. • POCl<sub>3</sub> serves much the same role as a strong acid does in acid-catalyzed dehydration. **janice gorzynski smith modified by dr. juliet hahn chapter ...** - 4 • the relative energies of the individual staggered conformations depend on their steric strain. • steric strain is an increase in energy resulting when non-bonded atoms are forced too close to one another. • gauche conformations are generally higher in energy than anti conformations because of steric strain. **lecture ch16 chem131 pikul - north seattle college - smith, 'janice' gorzynski.
